

D.O. DAVIS was born, reared and educated in the Pittsburgh, Pa., district. He received a degree in mechanical engineering from Carnegie Institute of Technology. Prior to his joining the Dominion Foundries and Steel, Ltd., Hamilton, Ontario, in 1940, he was employed by Jones & Laughlin Steel Corp. in Pittsburgh, and then in the consulting engineering business in Pittsburgh. While employed by Dominion Foundries and Steel, he has held various positions, such as: maintenance superintendent, safety director, chief engineer and now vice president—engineering.

D.O. DAVIS •

ASSOCIATION OF IRON AND STEEL ENGINEERS

President's Message 1969

Human resources—people—are our most vital asset. The best use of these resources can be realized by the development of an educational program which will provide people with the skills and knowledge necessary to meet the challenge of change.

For the free enterprise system to survive tomorrow, we must take an active and sincere interest in people and their problems today. Improved communications is the one essential medium that can determine our success or failure in working with people.

I suggest that men of the steel industry dedicate considerable time and thought to our industry and to its people. We should take a greater interest in education at all levels. We should continue to keep abreast of the latest technical developments in the industry. We should sell STEEL, both as a great industry that we are proud to be a part of, and as a product second to none.

The Association of Iron and Steel Engineers is proud of its part in such activities in the past. It hopes to continue, and even broaden, its participation in the future.

D.O. Davis
President, AISE
