

Harry L. Jenter
President, 1962

HARRY L. JENTER was born in Trenton, N.J., in 1901. He joined the American Steel & Wire Division's Trenton worked in 1917 as a draftsman, and for the next few years alternately worked for the division and attended college. In 1926 he was graduated from Syracuse University with a degree in mechanical engineering and transferred to the Cleveland office. In 1928 he was made assistant foreman at the Newburgh Wire Works. Mr. Jenter was transferred to the Cuyahoga works cold roll strip department in 1932, and in 1934 was made general foreman. He became assistant superintendent of the works in 1935, general superintendent in 1939 and in 1942

HARRY L. JENTER

ASSOCIATION OF IRON AND STEEL ENGINEERS

transferred to the headquarters office as assistant to the vice president of operations. He resumed the post of general superintendent of Cuyahoga works a year later, was made chief engineer in 1950, assistant district manager in 1952 and manager of operations—Cleveland District, American Steel & Wire Division, United States Steel Corp., in 1953. In 1956, he became vice president of operations.

The President's Message

We in the steel industry have attained a truly tremendous level of technological development, a goal attained with significant contributions from organizations such as the Association of Iron and Steel Engineers in the areas of communication, motivation and cooperative efforts toward the resolution of common problems. These accomplishments have affected our basic industry on a world-wide basis.

It now seems appropriate that we give increasingly serious attention to the problems we will jointly face in the future as we attempt to maintain and even increase our rate of progress. Certainly, one of the more serious of these problems will

be the providing of trained personnel and adequate facilities, for conducting the basic research that will be required for continued technological growth, and equally well trained personnel qualified to translate the knowledge developed into actual practice.

Your newly-elected officers believe that the responsibility and trust you have placed with us can best be justified through intensified efforts of this organization aimed at providing stimulation and opportunity for the education of qualified young people in the engineering profession, together with facilities allowing them adequate opportunity to utilize their talents. In these efforts we sincerely request your cooperation, as well as in continuing the fine technical programs developed in the past.

H.L. Jenter
President, AISE
