

## Berry Metal Celebrates 70 Years of Furnace Solutions.

After 70 years, Berry Metal Company continues to be on the cutting edge of furnace innovation.

Recognized as the world's leading designer and manufacturer of technologies for the Iron and Steel Industry, Berry Metal provides advanced furnace technology in the areas of BOF, EAF, and Blast Furnace. This technology is focused on improved cooling, maximizing efficiency of inputs, and reducing down time for maintenance.

Berry also provides solutions for alternative iron, downstream caster and rolling mills, and material handling systems for lime, carbon, and other alloys.

After having spent the past 25 years being an OEM supplier manufacturing equipment behind the scenes in the EAF sector, Berry Metal has taken significant steps in the past five years moving away from the OEM market to become a technology leader in the EAF market. Some of the largest, high profile EAF mills in the USA are realizing significant operational improvements utilizing Chemical Energy, Lime and Carbon Injection systems from Berry Metal.

"After 70 years, the idea remains the same today as ever – to serve our customers as a trusted value-added provider of new innovations that help improve efficiency, lower costs and increase throughput in the steel making process. We are all about advancing breakthrough technology for our customers", said David Werner, President & Chief Operating Officer. "Our goal is to deliver tomorrow's technology for companies to use today. We plan on doing that for the next 70 years."

Berry Metal has satellite offices around the world including Western Europe, Eastern Europe, China, Mexico, and Argentina. We continue to look to distribute our technology around the world.

About Berry Metal Company: BMC is more than a technology supplier... Since 1951, BMC has provided proven dependable manufacturing with continuous product innovation and improvement. We are an engineering company with unparalleled manufacturing capabilities. We provide dependable and ground-breaking furnace solutions for steelmakers. And we create long-term relationships by supporting those solutions through a "boots on-the-ground" approach because we are invested in our clients and their continued success.
