Ferrous 85" Co. starts up largest slitting line in the US at SDI Sinton campus.

SINTON, TX—Ferrous 85" Co. has started commercial production of the largest slitting line in North America. Located at SDI Sinton's EAF steel mill in Sinton, Texas, Ferrous 85" is providing SDI Sinton and their customers with toll slitting of HR and HR P&O material.

The Ferrous 85" slitter can process incoming master coils in widths from 36" to 87" and up to 105,000 pounds. Slit width capacity of the line ranges from 7" to 85" in gauges from .074" to .750".

The slitter can pull up to 12 mults in material up to .1875" and up to 3 mults in .750".

For material over .500" Ferrous 85 produces slit coils with 28" ID, material from 0.074" – 0.500" thick can be produced on either 24" or 28" ID.

The proprietary arbor and tooling technology of the Ferrous 85 slitter provides a very consistent, high quality slit edge which is ideal for edge and width sensitive applications such as ERW pipe production.

“We are extremely excited to have our slitting line up and running”, said president Ed Gonzalez. “We’re looking forward to providing SDI and their customers with world class slitting for years to come.”

About Ferrous85”Co

Ferrous85”Co is an operating division of Ferragon Corporation and supplies high quality slitting on a toll basis. Ferragon Corporation is one of North America’s leading metals services providers, providing support to supply chains in industries such as automotive and transportation, energy, appliance, construction, agriculture, mining and general fabrication. The divisions of Ferragon are leaders in the geographic markets they serve, providing value added processing of hot rolled and cold rolled steel as well as aluminum sheet products.
